ABSTRACT:

PURPOSE: To provide the title emulsion having well-balanced properties with regard to adhesion, elasticity and strength, consisting of an aqueous emulsified copolymer obtd. from an alkyl (meth)acrylate monomer, an ethylenically unsaturated carboxylic acid monomer and a copolymerizable monomer.

CONSTITUTION: 100pts.wt. mixture of 70 \pm 99.5% (by weight; the same applies hereinbelow) alkyl (meth)acrylate (A) having a 1 \pm 10C alkyl group, 0.5 \pm 15% ethylenically unsaturated carboxylic acid monomer (B) and 0 \pm 20% monomer (C) copolymerizable therewith is emulsion-polymerized in 100 \pm 300pts.wt. water (D) in the presence of an emulsifying agent, a chain transfer agent and a polymn. initiator (E) at 5 \pm 80 $^{\circ}$ C for 15 \pm 30hr to obtain the title emulsion composed of an aqueous emulsified copolymer having a weight-average MW (Mw) of 100,000 \pm 700,000 in terms of PS, a ratio of Mw to number-average MW (Mn) of 1.4 \pm 6, such a glass transition temp. profile that at least two peak positions exist between -45 and -30 $^{\circ}$ C and between -25 and 5 $^{\circ}$ C and such a particle size distribution that 35 \pm 65% of the powder is composed of particles having an average particle size of 2,000 \pm 3,000 μ m; 35 \pm 65% thereof is composed of particles having an average particle size of 4,000 \pm 5,000 μ m; and at least 80% thereof is composed of particles having an average particle size of 2,000 \pm 6,000 μ m;.

35-65% 200-300nm
35-65% 400-500nm
at least 80% 200-600nm
